Problem 1 (100 POINTS):
We want to create a program in C to implement an automatic poll about socio-economic aspects of the students in the University of Florida.
The questionnaire will be the following:
1) Gender? (F/M)
2) How old are you?
3) Do you work? (Y/N)
   - If the person works: What is your monthly salary?
4) Are you married? (Y/N)
5) How many children do you have?
   - Age of children number i: (Ask the age of each children).
6) What is the social media you use the most?
   1. Twitter
   2. Facebook
   3. Google+
   4. LinkedIn
   Social media? (1-4):

Do you want to answer the Poll? (Y/N)

If the user answers Yes (Y), the poll is asked again.
After inserting all the Polls, the program must answer the following questions:
- What percentage of female students work and are married?
- What is the average age of the children of the students?
- What is the favorite social media of the students with an age less than or equal to 25 years?
