COT 5405 Analysis of Algorithms Summer 2009
Homework Submission Instructions for On Campus Students

1. NO LATE submissions are accepted. If you are not completely done, submit "as is", since that will fetch some partial credits, which is better than no credit.

2. You MUST attach the cover sheet on all your homework submissions.

3. Typed in answers are the preferred method, but handwritten submissions are permitted too, provided it is very neat and legible. Illegible / unreadable / semi-readable answers will receive ZERO credits.

4. If possible, please have the answers printed / written in the same order of the questions. (This is only a suggestion, not a strict requirement.)

5. You can submit your homework to the any of the TAs during their office hours before the deadline. TAs will not accept any homework after the deadline.

6. Usually, your homework assignments would be given on Monday and you have exactly one week to turn in your assignment. You can either submit it during TA office-hour or e-mail it (if typed in).

7. Be precise while explaining your logic. Your credits are NOT proportional to the length of your answer. False or deliberately deceiving logics are strongly discouraged. Points may be deducted for unnecessarily long answers.

8. Discussion with fellow students is permitted, but you MUST write your own answers. In case you collaborate with someone, please mention it. Without any mention of any collaboration, we will assume that your work is completely original. If cheating is discovered in such "original" cases, it will be strictly dealt with.

9. If you manage to find the solution on Internet or from previous semester solutions, any copying from there would be treated as cheating. First of all, you should not try to obtain the solution in that manner, but if you did it anyway, please understand it and then write it from your own mind.

10. You MUST provide complexity analysis of all the algorithms that you propose, irrespective of whether asked specifically or not. The only exception could be when we ask you specifically not to do it.
